Sample Vascular Surgery MCQs with Explanations

Question 1:

Which of the following is the most common cause of abdominal aortic aneurysm (AAA)?

- A) Vasculitis
- B) Atherosclerosis
- C) Traumatic injury
- D) Infection

Answer: B) Atherosclerosis

Explanation:

Atherosclerosis is the predominant etiological factor in AAA formation, accounting for most cases. It causes degeneration of the arterial wall, leading to aneurysm development. Vasculitis and infections can cause aneurysms but are less common. Traumatic injury may cause pseudoaneurysms but is not a primary cause of degenerative AAA.

Question 2:

In a patient presenting with acute limb ischemia, which of the following is the most urgent management step?

- A) Initiate anticoagulation
- B) Perform surgical bypass immediately
- C) Administer thrombolytic therapy
- D) Revascularize within 6 hours to prevent tissue loss

Answer: D) Revascularize within 6 hours to prevent tissue loss

Explanation:

Time is critical in acute limb ischemia. Revascularization within 6 hours significantly improves limb salvage chances. While anticoagulation and thrombolysis are important, definitive revascularization is urgent. Surgical bypass may be indicated but is not necessarily the first step unless performed emergently.
