Battery Handling and Charging Procedures

Since electric forklifts rely on batteries, proper management is vital for safety, performance, and lifespan.

Battery Types

- Lead-Acid Batteries: Common, cost-effective, require regular maintenance.
- Lithium-Ion Batteries: Higher initial cost but lower maintenance, faster charging, longer lifespan.

Charging Guidelines

- Always use the designated charger compatible with your battery type.
- Charge in a well-ventilated area away from ignition sources.
- Follow the charging cycle recommended in the manual (typically 8-12 hours for lead-acid).
- Do not overcharge; disconnect once fully charged.
- Regularly check electrolyte levels in lead-acid batteries and top up with distilled water as needed.
- Ensure battery terminals are clean and free of corrosion.
- Use personal protective equipment during handling, including gloves and eye protection.

Battery Maintenance

- Conduct routine inspections for leaks or damage.
- Clean terminals and connectors periodically.
- Equalize charge in lead-acid batteries to prevent stratification.
- Store batteries in a cool, dry place when not in use.
- Follow manufacturer's guidelines for replacement timing.

Routine Maintenance and Inspection

Maintaining your Toyota electric forklift in optimal condition extends its lifespan and ensures safety.

Daily Checks:

- Visual inspection of forks, mast, and load wheels.
- Check hydraulic fluid levels.
- Test warning lights and horns.
- Ensure battery charge level is sufficient.
- Look for leaks, corrosion, or damage.

Weekly/Monthly Maintenance:

- Inspect drive and load tires for wear.
- Clean battery terminals and check for corrosion.
- Lubricate moving parts as specified.
- Calibrate controls and sensors.

- Review safety devices.

Periodic Service Intervals (as per manual):

- Replace hydraulic filters.
- Check brake systems.
- Inspect electrical wiring and connectors.
- Overhaul batteries if necessary.
- Update software or control systems.
