- **SAS (Side-Angle-Side) Similarity:** If an angle of one triangle is equal to an angle of another triangle, and the sides including these angles are proportional, then the triangles are similar.
- **SSS (Side-Side-Side) Similarity:** If all three sides of one triangle are proportional to all three

sides of another triangle, the triangles are similar.

## 2. Transformations

Transformations involve moving or changing figures in a plane. They include:

- **Translations:** Sliding a figure from one location to another without rotating or resizing.
- **Rotations:** Turning a figure around a fixed point, called the center of rotation.
- **Reflections:** Flipping a figure over a line (mirror line) to produce a mirror image.
- **Dilations:** Resizing a figure proportionally from a fixed point, changing its size but not its shape.

Understanding how these transformations affect figures is crucial for solving problems involving symmetry and congruence.

## 3. Circles and Their Properties

Chapter 12 often delves into various circle theorems and properties, including:

- **Central and Inscribed Angles:** Central angles subtend arcs at the circle's center, while inscribed angles subtend arcs on the circle's circumference.
