Core Concepts in Class 12 Optics

Before diving into project ideas, it's essential to understand the fundamental principles that underpin optics.

- Reflection of Light

Reflection occurs when light bounces off a surface. The law of reflection states that the angle of incidence equals the angle of reflection. Key phenomena include:

- Regular Reflection: Occurs on smooth surfaces like mirrors, producing clear images.
- Diffused Reflection: Takes place on rough surfaces, scattering light in many directions.

- Refraction of Light

Refraction is the bending of light as it passes from one medium to another with different densities. This principle explains phenomena like the apparent bending of a stick in water and the formation of images in lenses.

Key parameters include:

- Refractive index (n): Ratio of the speed of light in vacuum to that in the medium.
- Snell's Law: $(n_1 \sin \theta_1 = n_2 \sin \theta_2)$

- Lenses and Mirrors

- Concave and Convex Lenses: Their shapes determine whether they converge or diverge light rays.
- Concave and Convex Mirrors: Used to form images with different characteristics depending on their shape and the position of the object.

Understanding these basic concepts is crucial for designing and executing optical projects.
