- Position Initial Sprites: Arrange characters and objects on the stage.

- Programming Sprites with Blocks

Scratch uses categorized blocks such as Motion, Looks, Sound, Events, Control, Sensing, Operators, and Variables.

Basic Movement Example:

- Drag a when green flag clicked block from the Events category.

- Connect a go to x: ___ y: ___ block from Motion to set starting positions.

- Use move ___ steps or change x by ___ blocks for movement controls.

Adding Interactivity:

- Use when key pressed blocks to respond to user inputs.

- For example, when right arrow key pressed ? change x by 10.

- Creating a Game Loop

A game loop keeps the game running and checking for user input or game conditions.

- Use forever blocks from the Control category.

- Inside forever, include movement checks, collision detection, and score updates.

- Detecting Collisions and Interactions

- Use touching ____? blocks from the Sensing category.
- Example: When the sprite touches a specific object, trigger an event such as increasing the score or ending the game.

- Managing Scores and Variables

- Create variables such as "Score" or "Lives" from the Variables category.
- Update variables with change ____ by ____ blocks when events occur.
- Display scores on the stage for real-time feedback.

- Change costumes or apply visual effects like change color effect by ____ to add visual dynamics.

- Incorporating Levels or Progression

- Use variables or broadcast messages to manage game states.
- Switch backdrops or reset sprites when advancing to new levels.

Practical Example: Building a Simple Catch Game

Let's put the above steps into practice with a basic catch game where a character catches falling objects.

Step 1: Prepare Sprites

- Player sprite: a basket or character.
- Falling object: a ball or fruit.
- Backdrop: simple background.

Step 2: Program the Falling Object

- When green flag clicked:
- Set the object's y position to a high value (e.g., 180).
- Repeat forever:
- Change y by -5 (falling speed).
- If touching the bottom (y position
- If touching the player sprite, broadcast a 'caught' message.

Step 3: Program the Player

- When green flag clicked:
- Set initial position.
- Use when key pressed blocks:
- Left arrow: change x by -10.
- Right arrow: change x by 10.
- When receiving 'caught' message:
- Increase score.
- Play a sound or animation.

Step 4: Add Scoring and End Conditions

- Create a score variable.
- When object is caught, increase score.
- When score reaches a target, broadcast a 'game over' message and stop all scripts.

Tips for Enhancing Your Scratch Games

- Use Cloning: To create multiple falling objects without manually scripting each.
- Implement Sound Effects: For actions like catching or missing.
- Add Levels: Change game difficulty by increasing falling speed or adding obstacles.
