2. Which of the following is a correct procedure before starting a forklift?

- A) Check the fuel and oil levels.
- B) Conduct a pre-operational inspection, including brakes, steering, controls, and warning devices.

- C) Ensure the area is clear of obstacles and pedestrians.
- D) All of the above.

Answer: D) All of the above.

Explanation:

Pre-operational checks are vital to safe forklift operation. This includes inspecting fuel levels, brakes, steering, warning signals, mast, and tires. Additionally, ensuring the work area is clear reduces the risk of accidents. These steps are part of the standard safety protocols mandated by legislation and training standards.

3. When lifting a load, the forklift should be positioned:

- A) With the forks lowered to the ground.
- B) With the load close to the ground, and the mast tilted slightly back.
- C) With the load as high as possible for better visibility.
- D) With the load extended forward to balance the forklift.

Answer: B) With the load close to the ground, and the mast tilted slightly back.

Explanation:

Lifting loads from the ground with the forks level or slightly tilted back ensures stability and control. Raising loads too high can shift the centre of gravity, risking tipping. Keeping loads low during transport and tilting the mast back slightly enhances safety and reduces the risk of load falling.

4. Which of the following actions is inappropriate when operating a forklift?

- A) Carrying loads that obstruct your view.
- B) Traveling with the load tilted forward.
- C) Operating at a safe speed appropriate to conditions.
- D) Using warning signals when necessary.

Answer: A) Carrying loads that obstruct your view.

Explanation:

Obstructed vision impairs the operator's awareness of surroundings and can cause accidents. In

such cases, the operator should either seek assistance or use a spotter. Operating at unsafe speeds, especially with loads, or neglecting warning signals also increases risk.

5. How often should forklift inspections be carried out?

Answer:

Forklift inspections should be performed daily before operation, with more comprehensive checks conducted weekly or as recommended by the manufacturer.

Explanation:

Daily inspections help identify potential issues early, such as leaks, worn tires, or brake problems. Maintaining accurate records of inspections is also a legal requirement in many jurisdictions.

- B) To show the forklift's fuel efficiency.
- C) To track the operator's hours.
- D) To provide instructions for refuelling.

Answer: A) To determine the maximum load capacity at various load centers.

- Question 2: When operating a forklift in a confined space, you should:
- A) Operate at full speed to complete tasks quickly.
- B) Use the horn to alert others and move cautiously.
- C) Ignore pedestrians if you have right of way.
- D) Raise loads as high as possible to avoid obstacles.

Answer: B) Use the horn to alert others and move cautiously.
